| <u>DATE : 25/03/2025</u> | |

AIM:

To build and train a simple Generative Adversarial Network (GAN) using TensorFlow for generating images.

ALGORITHM:

Step 1: Import required TensorFlow and data libraries.

Step 2: Load and preprocess the MNIST dataset.

Step 3: Define the Generator and Discriminator models.

Step 4: Create the loss functions and optimizers for both networks.

Step 5: Train the GAN by alternating training of the discriminator and generator.

Step 6: Generate and visualize synthetic digit images.

PROGRAM:

```
